Cairo, Egypt

SUMMARY

Computer Science student with hands-on experience across the stack — frontend with React and TypeScript, backend with Node.js, Express, and PostgreSQL. Built and shipped a cross-browser extension now used by 9,000+ active users.

EDUCATION

- Zagazig University** Alsharqiya, Egypt
Bachelor of Computer Science Expected Graduation: 2027
GPA: 3.5 (A)

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Backend Technologies: Node.js, Express.js, Fastify, Socket.IO, REST APIs

Frontend Technologies: HTML, CSS, React, Tailwind, React Router

Databases / Caching: PostgreSQL, Redis

Cloud / DevOps: Docker, AWS, CI/CD, Linux

PROJECTS

- TubeSize** [↗](#)
• **9,000+ Active Users** | *Cross-Browser Extension (Chrome, Firefox, Edge)* **9,000+ Active Users**
 - Built a **cross-browser extension** in **TypeScript** and **React** that estimates video/stream file sizes across **YouTube**, **Twitch**, and **Kick**; published on Chrome Web Store and Firefox Add-ons.
 - Reverse-engineered three undocumented platform APIs: YouTube's adaptive streaming formats (itag, 144p–8K), Twitch's **GraphQL** playback-token API, and Kick's **IVS Player** API.
 - Developed a **real-time bandwidth analytics dashboard** with **Recharts**, tracking per-video data consumption via the **PerformanceObserver** API with daily/weekly/monthly/lifetime views.
 - Automated CI/CD with **GitHub Actions** for linting, type-checking, and **Jest** testing, publishing cross-browser builds (Chrome/Firefox) on production tags.
- ChessLab** [↗](#) | **Live Demo** [↗](#) | *Real-Time Multiplayer Chess Platform (React, Node.js)* *In Progress*
 - Built a real-time multiplayer chess app with **room-based matchmaking** (UUID-coded private rooms) and **Socket.io** for live game state sync between players.
 - Implemented **server-authoritative game logic** using **chess.js** to validate every move, turn order, and board orientation, preventing client-side cheating.
 - Built a complete **authentication system** using **Postgres** and **Drizzle** to manage player identity and protect room creation/join endpoints.
