

# MOHAMED SAYED ALI

Full-Stack Web Developer (Node.js, React.js)

+20 1140933253 | [mohamedsaid0573@gmail.com](mailto:mohamedsaid0573@gmail.com) | [github.com/MohamedSayed0573](https://github.com/MohamedSayed0573) | [linkedin.com/in/mohamed-sayed3](https://linkedin.com/in/mohamed-sayed3)  
Cairo, Egypt

## SUMMARY

Computer Science student with hands-on experience across the stack — frontend with React and TypeScript, backend with Node.js, Express, and PostgreSQL. Built and shipped a cross-browser extension now used by **9,000+ active users**.

## EDUCATION

### Zagazig University

Bachelor of Computer Science

Al-Sharqia, Egypt

Expected Graduation: 2027

- **Academic Standing:** Excellent (GPA: 3.5)
- **Relevant Coursework:** Data Structures & Algorithms, OOP, Database Systems, Computer Networks, Compiler Design

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, C++, SQL

**Backend Technologies:** Node.js, Express.js, Fastify, Socket.IO, REST APIs

**Frontend Technologies:** HTML, CSS, React.js, Tailwind

**Databases / Caching:** PostgreSQL, Redis

**Cloud / DevOps:** Docker, AWS, CI/CD, Linux

## PROJECTS

**TubeSize** | Cross-Browser Extension (Chrome, Firefox, Edge)

[GitHub](#) | [Chrome Store](#)

- **9,000+ Active Users**
- Built a **browser extension** in **TypeScript** and **React** that estimates video and livestream file sizes across **YouTube**, **Twitch**, and **Kick**; published on Chrome Web Store and Firefox Add-ons.
- Eliminated the need for `yt-dlp` by implementing a fully client-side metadata extraction pipeline, reducing end-to-end latency from **8.0s** to **35ms** (99.6% reduction, **230x faster**)
- Developed a **real-time bandwidth analytics dashboard** using **Recharts** and the PerformanceObserver API to visualize per-video bandwidth consumption with daily, weekly, monthly, and lifetime statistics.
- Reverse-engineered undocumented APIs across multiple streaming platforms to reliably retrieve media metadata without official SDKs or download utilities.

**ChessLab** | Real-Time Multiplayer Chess Platform (React, Node.js)

[GitHub](#) | [Live Demo](#)

- Built a **full-stack real-time chess platform** with online multiplayer, matchmaking, and synchronized gameplay using **React**, **Express**, and **Socket.IO**.
- Integrated the **Stockfish** chess engine using **WebAssembly** and **Web Workers** for responsive single-player gameplay without blocking the main thread.
- Engineered a **server-authoritative backend** that validates every move, manages per-player chess clocks, and handles resignations, draw offers, disconnects, and reconnection windows with no trusted client logic.

## LANGUAGES

**Arabic:** Native

**English:** C1
